

The funniest and most efficient Typing Training for students!

Why Typing Training?

The use of a computer in primary- and secondary school, high school, university and in society in general is increasing. Students who have had typing training at a young age are better prepared for considerable future computer use.

In addition, students who can find the keys automatically, do not have to focus on typing. They can focus on the content of the assignment. Research by H. van der Meijden connected to the Radboud University in Nijmegen, showed, that students who learned the skill of touch-typing with 10 fingers at a young age, are better prepared for secondary school. A correct posture while typing is also part of the training. It prevents RSI problems.

Touch-Typing for young people

During a 4-hour training course your child will learn the position of all keys on the keyboard from a skilled trainer. The training makes use of a unique learning feature in which visualisation and association techniques are the core elements. Since the training is short, nobody will give up. The training is fun and interactive.

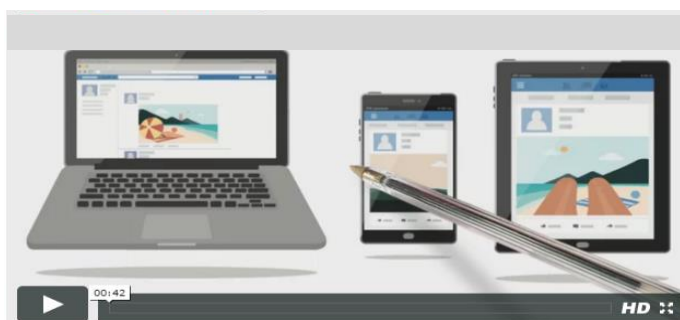

Increasing Typing Speed

After the training the student is able to touch-type blind using ten fingers. To enhance the skill and increase typing speed, during two weeks an exercise will be sent daily by email. This exercise will take a maximum of 15 minutes per day. After this exercise period, the students will frequently receive an email to practice and to measure their progress. After 6 weeks they will receive their last evaluation test. Additional exercises are also available through email. By practicing (daily), such as the training exercises and typing of an essay, the typing speed will increase.

Support

A lot of exercises are available within the training course and there are several tests in which the progression is measured. The results are available immediately and an email with the result is sent to the child.

The method to learn typing quickly and efficiently while having fun!

The Parent's Role for the young ones

We advise parents to motivate their child to consciously practise every day. The best and fastest result will be obtained by practicing regularly.

SmartTyping at What Age?

The SmartTyping training course is available for students and children from the age of 11 who know the alphabet well and do not yet touch-type blind.

SmartTyping, the Most Fun and Efficient Typing Training

There are many advantages to learn how to touch-type blind through SmartTyping:

Additional exercise material is available.

- After the training course the students can fully concentrate on what they want to type instead of thinking about the typing itself.
- Adopting a relaxed work posture prevents RSI.
- While typing, the fine motor skills are used so the course improves this!
- The training is fun and informal and only takes 4½ hours.
- There are 3 tests in which progression will be measured.
- The results of the exercises and tests will be sent by email.
- The exercise system is online.

We also like to provide SmartTyping training courses in educational institutions. The benefit for students in primary and secondary schools is great. No SmartTyping at your child's school yet?
